**REPORT OF EXAMINATION OF TESTS OF PRESSURE VESSELS**

- 1 We have noted that a number of reports of examination and tests for pressure vessels issued by Private Authorised Boiler Inspectors (PABIs) do not contain the correct data for the pressure vessel that is inspected.
- 2 All PABIs are reminded to ensure that any information or data that they enter into their reports, such as dimensions, descriptions, distinctive numbers, etc. are accurate and correct. These data are normally also reflected in the 3<sup>rd</sup> party authority survey report issued for the vessel. In the case of distinctive number, this number is usually hard stamped on the vessel body. PABIs are required to ensure that markings on the vessel body tally with the markings indicated on the 3<sup>rd</sup> party authority survey report.
- 3 Appropriate action will be taken against any PABI who enters incorrect or inaccurate data in reports of examination and tests of pressure vessels, which they issue.
- 4 Thank you.
